DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1, 3, 4, 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Katsube et al (US Patent No. 6,188,699 B1).

Regarding claims 1, 3, 4, 6, Katsube discloses a packet buffer equipment (router) for receiving virtual channel multiplexed ATM (figure 18) cells to assemble into a packet for each virtual channel without modifying the received cells and to output on a per packet basis, (col.6 lines 30-45) said packet buffer equipment comprising:

a packet buffer memory (input buffer 76, figure 7) having a plurality of cell buffers for storing a received packet on a per cell basis;

a buffer management memory (information table, col.17 lines 30-35) for retaining buffer management information corresponding to each cell buffer in said packet buffer memory;

a packet-under-assembly pointer (pointer based on information table (col.22 lines 1-25) for constituting a packet-under-assembly queue to store cells into said packet buffer memory on the virtual channel basis to assemble cells; and

a header analysis and generation means (CPU for analyzing header information, col.21 lines 64-67) for analyzing the cell to generate a new header cell.

Katsube does not disclose that the assembling packet is made from the top cell to the end cell and the header is created for the new top cell. However, it would have been obvious to one having ordinary skill in the art to have the feature of assembling cells from the top to the end cells, and creating the header for the new top cell so that processing cells in the environment of conversing data between cells and packets can be achieve properly.

Allowable Subject Matter

3. Claims 2, 5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
